

### ABSTRACT

An assembly, a system and a method provide a magnetic image assembly to mount on a garage door having printed designs, pictures and/or indicia wherein the use of more than one of the covers creates an image on the garage door. The assembly, the system and the method create images which may be seasonal or festive themes, celebratory salutations and/or personal messages. The magnetic cover assembly provides an image which forms a decorative design and/or a personal message on the garage door panels. The magnetic image assembly has a magnetic backside for attaching to the garage door and a front side for receiving printed designs, pictures and/or indicia. The front side of the magnetic image assembly may have glow in the dark material creating a magnetic image assembly which may be more visible in dark surroundings. The front side of the magnetic image assembly may have a light reflective material creating a magnetic image assembly which is visible when light is directed upon the light reflective material.
